NYS Earth Day Submission

Earth day is a reminder that we all share one planet and that we need to take care of it since it's our only home. The theme "Our Power, Our Planet!" means that everyone can help protect the Earth. Even students can make a difference through small actions every day. When many people do small things, it adds up to a big change.

Recycling is one way to help the environment. It means using materials again instead of throwing them away. Things like paper, plastic, glass, and metal can be recycled into new products. This helps reduce trash in landfills and oceans. It also saves natural resources like trees and water.

Reducing waste is also very important for the planet. We can do this by using reusable water bottles instead of the plastic ones. We can also bring reusable bags when shopping to not waste paper. These simple choices help lower the amount of trash we create. Small actions like these can make a big difference over time.

Schools help students learn how to take care of the environment. Students learn about recycling and why it is important, They can practice good habits at school and at home. This helps more people become aware of environmental problems. It also encourages others to do the same.

In conclusion, "Our Power, Our Planet!" shows that we all have a role in protecting the Earth. Recycling and reducing waste are simple ways to help. If we work together, we can help keep the planet clean and safe.
